

ABOUT

Headlines and news articles, written from primary sources.

NEW • FOR AGENTS

Install the HuggingNews skill from huggingnews.com/SKILL.md with your preferred agent. Optionally, create an API key in your profile and set `HUGGINGNEWS_API_KEY` to unlock the full feed.

HuggingNews is a news wire for AI and open source news. Our AI pipeline writes each headline and short article from public source material: posts on X, announcements, papers, filings, release notes, reporting and commentary.

We aim for speed, comprehensiveness, objectivity and a light touch.

Instead of scanning hundreds (or thousands) of accounts or relying on gatekeepers to decide what the news is, or how to interpret it, our AI follows all relevant sources, discovers news when multiple sources are writing about something new, and aims to write the story in a compact, objective and unbiased form, citing the sources.

How it works

1 We collect the primary source material.

We follow X accounts, labs, companies, projects, reporters, and researchers who post about AI news. We gather the posts and look for clusters that could include potential news about releases, product, funding announcements, and so forth.

2 We write the story.

When the sources point to a new or novel event, we research the story, write a short article, and a self-contained scannable headline. We ground the article in the information we collected, favoring primary sources.

3 We show the sources and quotes behind the story.

We show the source material and useful pull quote (posts on X can get long these days), and a link to the original. Primary sources are always favored over aggregators and commentary. Analysis and commentary are shown when they add context.

Topics

We cover AI labs, model releases, open source projects, developer tools, research papers, infrastructure, chips, agents, funding, policy, security, products, company news, and adoption by businesses and governments.

[Models](#)[Research](#)[Open Source](#)[Chips](#)[Infrastructure](#)[Agents](#)[Funding](#)[Policy](#)[Security](#)[Industry](#)

Scannable and comprehensive news feed

Each self contained story includes topics, tags, entities, sources, and links back to the original information. Use filters to narrow the feed by topic, company, lab, project, person, or product.

A note on judgment. We focus on concrete news and developments: releases, research, funding, product changes, policy moves, company updates, and material reactions from people in the AI and tech industry. We include commentary and gossip, but usually only when it's related to a concrete news story or announcement.

EXAMPLE STORY

Anthropic Releases Claude Opus 4.8 With Stronger Coding and Cheaper Fast Mode

May 28, 1:47 PM EDT · 105 posts from 56 accounts

[Models](#)[Releases](#)[Products](#)[Agents](#)

Anthropic released Claude Opus 4.8, an update to its top AI model focused on coding, knowledge work and longer Claude Code tasks. Boris Cherny, head of Claude Code, called it the company's strongest coding model yet and said it catches its own bugs instead of declaring victory early.

Fast Mode runs the same model at roughly 2.5 times the speed and now costs \$10 per million input tokens and \$50 per million output tokens, down from the prior fast tier. Anthropic said Opus 4.8 is about four times less likely than Opus 4.7 to let flaws in its own code pass unremarked and scored 69.2% on SWE-bench Pro, up from 64.3%.

Cursor said Opus 4.8 works more efficiently than Opus 4.7 and is more persistent on harder tasks, while GitHub said early testing showed better code understanding, generation and large-codebase navigation. Some Claude Code users still said the model can feel careful or slow on heavier work.

We update the feed through the day. Each story shows the approximate time of the news or announcement, as well as timestamps for every post from X. The news is not entirely real time, but we update frequently throughout the day and a bit more infrequently overnight.

Sign in

Sign in with HuggingFace to get the full archive and other features. We are also adding personalization. Let us know how you'd like to customize your AI news.

Support for agents

The site is meant to be readable by agents as well as people. Story pages follow a consistent layout: headline, article, timestamp, topics, tags, entities, source roles, source text, and links to original sources. MCP, API, and RSS are coming. Let us know how you'd like to connect your agent to our news feed.
